

Time Complexity (Big-O) Cheatsheet

Big O, Big Theta and Big Omega notations express an algorithm's time and space complexity. It helps us to quantify the efficiency of our code.

- **Big O:** Worst-case performance of an algorithm.
- **Big Theta (Θ):** Average performance of an algorithm.
- **Big Omega (Ω):** Best-case performance of an algorithm.

Common Data Structures

Data Structure	Time Complexity								Space Complexity
	Average				Worst				Worst
	Access	Search	Insertion	Deletion	Access	Search	Insertion	Deletion	
Array	$\Theta(1)$	$\Theta(n)$	$\Theta(n)$	$\Theta(n)$	$\Theta(1)$	$\Theta(n)$	$\Theta(n)$	$\Theta(n)$	$\Theta(n)$
Stack	$\Theta(n)$	$\Theta(n)$	$\Theta(1)$	$\Theta(1)$	$\Theta(n)$	$\Theta(n)$	$\Theta(1)$	$\Theta(1)$	$\Theta(n)$
Queue	$\Theta(n)$	$\Theta(n)$	$\Theta(1)$	$\Theta(1)$	$\Theta(n)$	$\Theta(n)$	$\Theta(1)$	$\Theta(1)$	$\Theta(n)$
Singly-Linked List	$\Theta(n)$	$\Theta(n)$	$\Theta(1)$	$\Theta(1)$	$\Theta(n)$	$\Theta(n)$	$\Theta(1)$	$\Theta(1)$	$\Theta(n)$
Doubly-Linked List	$\Theta(n)$	$\Theta(n)$	$\Theta(1)$	$\Theta(1)$	$\Theta(n)$	$\Theta(n)$	$\Theta(1)$	$\Theta(1)$	$\Theta(n)$
Hash Table	N/A	$\Theta(1)$	$\Theta(1)$	$\Theta(1)$	N/A	$\Theta(n)$	$\Theta(n)$	$\Theta(n)$	$\Theta(n)$
Binary Search Tree	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(n)$	$\Theta(n)$	$\Theta(n)$	$\Theta(n)$	$\Theta(n)$
AVL Tree	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(\log(n))$	$\Theta(n)$

Sorting Algorithms

Algorithm	Time Complexity			Space Complexity
	Best	Average	Worst	Worst
Bubble Sort	$\Omega(n)$	$\Theta(n^2)$	$\Theta(n^2)$	$\Theta(1)$
Insertion Sort	$\Omega(n)$	$\Theta(n^2)$	$\Theta(n^2)$	$\Theta(1)$
Selection Sort	$\Omega(n^2)$	$\Theta(n^2)$	$\Theta(n^2)$	$\Theta(1)$
Mergesort	$\Omega(n \log(n))$	$\Theta(n \log(n))$	$\Theta(n \log(n))$	$\Theta(n)$
Heapsort	$\Omega(n \log(n))$	$\Theta(n \log(n))$	$\Theta(n \log(n))$	$\Theta(1)$
Quicksort	$\Omega(n \log(n))$	$\Theta(n \log(n))$	$\Theta(n^2)$	$\Theta(\log(n))$
Counting Sort	$\Omega(n+k)$	$\Theta(n+k)$	$\Theta(n+k)$	$\Theta(k)$
Radix Sort	$\Omega(nk)$	$\Theta(nk)$	$\Theta(nk)$	$\Theta(n+k)$
Bucket Sort	$\Omega(n+k)$	$\Theta(n+k)$	$\Theta(n^2)$	$\Theta(n)$

Others Algorithms

Linear Search - $O(n)$

Binary Search - $O(\log n)$

Set - Add/remove/search: $O(1)$

Heap (it is always balanced):

- add/delete $O(\log n)$
- search $O(n)$
- search min/max $O(1)$

Dynamic Programming :

- Space Complexity $O(n)$
- Time Complexity $O(n.k)$, k is work done in each step

Recursion : mostly true for Backtracking also

- if calls itself 2 times, $O(2^n)$
- if calls itself 3 times, $O(3^n)$

Divide and Conquer

Greedy

Input size, Complexity & Algo guess

- **$n \leq 10$** : maybe $O(n^2 \cdot n!)$ or $O(4^n)$ - backtracking or brute-force recursive
- **$10 < n \leq 20$** : $O(2^n)$ - backtracking and recursion
- **$20 < n \leq 100$** : $O(n^3)$ - nested loops
- **$100 < n \leq 1,000$** : $O(n^2)$ - nested loops with something efficient
- **$1,000 < n < 100,000$** : $O(n \cdot \log n)$ or $O(n)$ - hashmap, 2 pointers, sliding window, monotonic stack, binary search, heap
- **$100,000 < n < 1,000,000$** : $O(n)$ or $O(n \cdot \log n)$ with small k - maybe hashmap or binary search
- **$1,000,000 < n$** : $O(\log n)$ or $O(1)$ - math formula, binary search or hashmap
